Title : Problem of the Role of the Central Nervous System in the
Regulation of Protein Metabolism in Patients with Ulcers.

Orig Pub : Klinich. meditsina, 1957, 35, No 6, 38-4(2)

Abstract : In 52.7% patients (total examined 110) with an ulcer the
protein content in the blood serum, as an A/G ratio, was
below normal. The reason for these changes, in the opinion
of the authors, lies in the impairment of the regulation
of metabolism as it pertains to the CNS. The latter finds
confirmation in the fact that under the influence of phar-
macological agents (bromide, luminal, caffein), which in-
fluence the function of the CNS, a normalization of the
content of protein is noted in the serum with normal

titer and bactericidal property of blood are subject to no definite law and do not positively indicate such condition. Best indication is the phagocytic index, which is usually less than normal in premature babies, especially during some stages of the diseases. It may be assumed that unsolved problems of immune reaction in the period immediately following parturition can be solved only by simultaneous study of humoral cell indexes of both mother and child. AUTHOR: Bakakin, G. N.; Vygodskiy, A. I.; Nesterenko, V. G.

TITLE: The ITP-LI4 plating thickness meter

SOURCE: Soveshchaniye po probleme izpol'zovaniya atomnoy energii. Kiev, 1961. Radiatsionnaya avtomatika, izotopy i yadernyye izlucheniya v nauke i tekhnike (Radiation automation control systems, isotopes, and nuclear radiation in science and technology); doklady soveshchaniya. Kiev, Izd-vo AN UkrSSR, 1964, 37-39

TOPIC TAGS: thickness measurement, plating thickness, clad metal, clad steel, metal coating, radioactive measurement / ITP-LI4 meter

ABSTRACT: The ITP-LI4 plating thickness meter, which operates on the principle of backward scattering of beta-radiation, is manufactured at the Khar'kovskiy zavod im. V. A. Maly'sheva (V. A. Maly'shev Factory in Khar'kov). The author points out that methods of thickness measurement by the use of radioactive isotopes have many advantages over other methods, and lists several of these advantages. The new instrument uses the radioactive isotope Ti^{204} as the source of beta radiation. The energy of the beta rays is 0.77 MeV and the radioactivity of the annular source is 15 millicuries. This rather high source radioactivity was chosen to make it possible to measure the thickness of nickel-phosphorus platings on steel. The design of

Card 1/2

ACCESSION NR: AT4045008

the instrument is based on the serial microrentgenometer "Kaktus", whose two-tube bridge circuit is highly sensitive and sufficiently stable. In order that the instrument register only the voltage corresponding to radiation reflected from the coating, the circuit contains a predetermined compensation for the constant component of the ionization voltage. A circuit diagram of the instrument is presented and calibration curves for determining the thicknesses of various coatings on various bases are given. The usual measurement time is 30-40 seconds, and the instrument can measure thicknesses down to 20 μ with an accuracy of 3-5%. Orig. art. has: 2 figures, and 1 formula.

TITLE: New Technical Processes in the Metallurgical Industry (Novyye tekhnologicheskiye protsessy v metallurgicheskoy proizvodstve)

PERIODICAL: V sb.: Novyye tekhnol. protsessy. Khar'kov, Oblizdat, 1957, pp 5-27

ABSTRACT: Certain advances in the technical processes of "small-scale metallurgy" at the Khar'kov Transportation Equipment Plant are set forth. O₂ is used at this plant to speed the smelting of steel in electric furnaces and to heat liquid iron in cupola receivers and crucibles. The process of developing techniques for the manufacture of cast-iron crankshafts for the TE-3 Diesel locomotive, and the techniques used in casting steel ingots 13.5 t in weight, which are large for this plant, are described. A special section of the article is devoted to precision casting: investment casting, skin dry sand mold casting, chill casting of non-ferrous metals, and also the manufacture of forgings by drop-forging instead of open-die forging.

ABSTRACT: On the basis of a survey of the liquidus curves of real binary metallic systems comprising intermetallic compounds which have either a singular point or nonsingular gently-shaped maxima the authors derive an equation that satisfies the liquidus curves and the loop formed by a curve that intersects itself at the singular point.

LIT. MIRA, Leningrad, 1949. 511 pp.

Largely using vector and Gaussian notations, the author presents the classical theory of curves and surfaces in a logical pattern, starting with elementary properties of space

geometric properties associated with the first and second fundamental quadratic forms; and ending with a presentation of the fundamental formulae in the theory of surfaces and a discussion of intrinsic geometry. The book is distinguished by its excellent Russian typography and its wealth of examples, figures, and exercises.

TITLE Handbook of higher mathematics.
PERIODICAL Moscow: State publication for technical-theoretical literature
784 p. (1956)
reviewed 3/1957

The present book is a continuation of the author's "Handbook of elementary mathematics" and it is determined for absolvents of secondary schools. It contains a very detailed systematic collection of formulas and rules of the following domains: Analytic geometry of the plane (lines, curves of second order), analytic geometry of the space (notion of vectors, linear forms, surfaces of second order, systems of linear equations), fundamental notions of analysis (notion of numbers and functions, limit value), differential calculus, integral calculus, foundations of plane and spatial curves, series, differential and integral calculus for several variables, ordinary differential equations (up to the method of variation of constants for linear differential equations of second order). Complete proofs are given in exceptional cases only, but the introduction of notions is made in detail and many examples are given. Finally the author gives tables of the natural logarithm of the numbers 1,00 to 9,99 for 4 decimales and of the exponential function for the arguments of 0,00 to 3,99 for 5 valid digits and a table of 147 indefinite integrals.

YYGODSKIY, Mark Yakovlevich

[Reference manual in elementary mathematics; tables, arithmetic, algebra, geometry, trigonometry, functions, and graphs] Spravochnik po elementarnoi matematike; tablitsy, arifmetika, algebra, geometriia, trigonometriia, funktsii i grafiki. Izd.10., stereotipnoe. Moskva, Gos.izd-vo tekhniko-teoreticheskoi lit-ry, 1957. 412 p. (MIRA 14:3)
